Study on Situational Leadership in Forest Management with Swot Analysis

Ginung Pratidina State Administration Study Program, Djuanda University, Bogor Indonesia

<mark>Abubakar Iskandar</mark> State Administration Major, Djuanda University, Bogor, Indonesia

Keywords: forest management, formal leadership, informal leadership.

Abstract

The research was motivated by the existence of two leaderships. They are formal and informal in one forestry area. They are the Village Government and the Indigenous Peoples Leadership. Both of the leaderships interact and influence the interests of the forest management programs. The objectives of the research are to Analyze the Weight and Rating of the Internal Factory Analysis Strategy, to Analyze the Weight and External Rating of Factory Analysis Strategy, and to Formulate Situational Leadership Strategy for Village Governments in Forest Management in the Halimun Salak Mountain Area. The research method used qualitative analysis by SWOT analysis approach. The results of the research showed the situational leadership in formal and informal governments had an internal score that the Strength is Greater than the Weakness and the External Score which the opportunities both formal and informal leaderships that the strength score is greater than the opportunity score that are 2.13> 2.05 for Informal leadership and 1.82> 1.75 for Formal leadership that means, it is in strong and high position because it is in quadrant I with alternative strategy and Growth Strategy.

Abstract

The research was motivated by the existence of two leaderships. They are formal and informal in one forestry area. They are the Village Government and the Indigenous Peoples Leadership. Both of the leaderships interact and influence the interests of the forest management programs. The objectives of the research are to Analyze the Weight and Rating of the Internal Factory Analysis Strategy, to Analyze the Weight and External Rating of Factory Analysis Strategy, and to Formulate Situational Leadership Strategy for Village Governments in Forest Management in the Halimun Salak Mountain Area. The research method used qualitative analysis by SWOT analysis approach. The results of the research showed the situational leadership in formal and informal governments had an internal score that the Strength is Greater than the Weakness and the External Score which the opportunity is greater than the threat. The Comparison of internal and external scores in strengths and opportunities both formal and informal leaderships that the strength score is greater than the opportunity score that are 2.13> 2.05 for Informal leadership and 1.82> 1.75 for Formal leadership that means, it is in strong and high position because it is in quadrant I with alternative strategy and Growth Strategy.

Keywords: forest management; formal leadership; informal leadership.

* Corresponding author.

1. Introduction

1.1. Background

The Impact of The Minister of Forestry Decree Number 175 / Kpts-II / 2003 concerning the expansion of Halimun Salak Mountain National Park (HSMNP) which originally had an area 40,000 hectares to 113,357 hectares with the merger of Mount Salak and ex Perhutani [9] had made culture shock for the people around HSMNP, where people who have long been accustomed to relying on their livelihoods from the forest suddenly not allowed to enter the areas, because legally the people not allow to work in the conservation area. The conditions often lead to conflict of forest interests that cannot be avoided [10]

Because of the unpreparedness of the leadership did government duties well. It can affect the people. An expectation gap can occur which potentially creates disharmony between the government and the people. Expectation gap is a gap that occurs because of differences between the expectations of the people and the actually serves as a guideline for the government in providing public services [2].

The compromise sometimes is difficult to reach both the people and the National Park. The expansion of HSMNP has caused a number of problems, especially regarding the low level of welfare of rural people around the forest, so it can influence the level of people dependence on forests which has an impact on the high disturbance and damage to the forest in the national park. Empirical data on land cover from 1989 to 2008 showed that the HSMNP area of 113,357 ha had decreased in quality and degradation by 22,000 ha or 19.4%.

The decreased in quality was caused illegal logging activities, illegal gold mining, and forest encroachment. The problem is not simple, because the Halimun Salak Mountain National Park area is unique where in some of these areas there are two systems of government. They are the formal government headed by the Village Head, and the non-formal government headed by kasepuhan (traditional leaders). The role of leaders in government is very important given the function of leaders as agents of change to implement government programs the people participation. Both of the leaderships support each other in the social life of the people [8]. But in the effort of forest management, indigenous people are very obedient to their traditional leaders. Anything forbidden by their traditional leaders, the people do not dare to violate them. The heterogeneity raises several groups of people whose sense of regional culture is strong because the differences can be seen from the habits and procedures of the people.

The people have two formal and informal leadership in one area are Sinar Resmi village subdistrict Cisolok, Sukabumi district. There are three indigenous people leaderships in the village that is commonly called Kasepuhan i.e. Kasepuhan Cipta Mulya, Sirna Resmi and Cipta Gelar. The three of The Kasepuhan Administration are Sinar resmi Village headed by the formal leadership of the village head.

In addition, Sinar Resmi Village is also in the Conservation Forest Area, Halimun Salak Mount National Park. When there are programs from the government both (formal and informal) leaderships are mutual communication and coordination, but sometimes there are dualism of interests. Example in forest governance, the indigenous people have traditions, views, and access to forests for life. Beside that the government and The Village Government and Halimun Salak Mount National Park (HSMNP) also have an interest in forest conservation. This often causes conflicts of interest. So every problems need the role of the leader is very important in dealing in conditions [9].

The objectives of the research are :

- a. Analyzing the Weight and Rating of the Internal Factory Analysis Strategy for Situational Leadership in Forest Management in the Halimun Salak Mountain Area
- b. Analyzing the Situational Leadership Weight and External Rating Factory Strategy Management of Forests in the Halimun Salak Mountain Area
- c. Formulating Situational Leadership Strategies in Village Governments in Forest Management in the Halimun Salak Mountain Area

2. Material and methods

2.1. The design, location and research time

The research used quantitative and qualitative approaches. According to [4] quantitative methods can be defined as a method of research that is postpostivisme which is used for researching on population or sample. The location of the research was in the area of Halimun Salak Mount National Park. The Research conducted in April – October 2018.

2.2. Sampling

The samples are 90 people that 45 people from the formal leader, they are the Government of the village, and 45 people from the non formal leaders. Based on the theory if the example of the withdrawal of all possible random sample size n is taken without a recovery from a finite population size N that has value of Central median and standard deviation then the withdrawal distribution example for middle grades sample average (mean) will come to the normal distribution with a standard deviation of central value [11].

This proposition can be close to the truth if the measurement results shown by independent variables are close to normal. The importance of this proposition is mainly to draw conclusions about the estimator of the sample which according to the central limit theorem follows or approaches the normal function, if the sample is large enough that is n to infinity. This proposition in practice already applies if n > 30, because in such circumstances the value of Table t for a particular alpha will approach the value of a normal table [5].

2.3. Data Sources and Data Collection

The Primary data sources were data from the Village Government and Indigenous Peoples Leadership. The Secondary data was obtained from the relevant agencies. Data in the form of solutions, decisions, suggestions and opinions were collected through Focus Group Discussion (FGD).

2.4. Data Analysis

The data Analysis in the research consisted of content analysis and SWOT analysis. Application of content analysis techniques through steps: data reduction, data display, and how to draw conclusions. The way the analysis was basically done since the researcher in the field and classifies the tendency of data from the field notes.

The Content analysis research is in-depth discussion of the content of information, and usually the source of research is verbal data. Thus, interviews are very important in this analysis. The procedure for content analysis techniques is carried out by adapting the recommended procedure [7] especially if it is obtained from certain theoretical studies related to certain thematic findings, the researchers make the possibility of conceptual elaboration on the tendency of the existing data.

Thematic finding cases are combined with the others, and made in the form of summary data. They are to make a synthesis of what the researchers know from the data as a way of drawing conclusions that are examined qualitatively [6].

Beside the content analysis, SWOT analysis was used, too. The SWOT analysis was conducted on data on the Situational Leadership Model in Forest Management in Halimun Salak Mountain National Park [1]. So the interviews and FGDs are very important in this analysis. Therefore data was in the form of ideas, opinions, thoughts and suggestions obtained from the FGD. At the end of the FGD, a mutually agreed strategy was formulated.

3. Results

3.1. The Weight Calculation and Internal Factory Analysis Strategy Rating (IFAS)

The Weight and Rating of the Internal Factory Analysis Strategy for Situational Leadership in Forest Management in the Halimun Salak Mountain Area in the following Table

| Internal Strategic Factors | Weight | Ratie | X Rating Weight | Comment |
|-------------------------------------------------------------------------------------|--------|-------|--------------------|------------------------------------------------------------------------------|
| Strength: | | | | |
| 1. Kasepuhan leaders have leadership with a high level of participation style | 0,13 | 4 | 0,5 | Produce decisions that can be accepted by the community |
| 2. The maturity level of members of indigenous peoples is quite high. | 0,09 | 3 | 0,28 | The effectiveness of the implementation of orders from the Kasepuhan leaders |

Table 1: Weight Calculation and Internal Rating Factory Analysis Strategy (IFAS)

| Internal Strategic Factors | Weight | Ratie | X Rating Weight | Comment |
|----------------------------------------------------------------------------------------------|--------|-------|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3.EffectiveKasepuhanleadersSituational Leadership | 0,09 | 3 | 0,28 | Every decision can be accepted by the people. |
| 4. Voluntary at work. | 0,09 | 3 | 0,28 | Because their role is hereditary |
| 5. Obedience to Kasepuhan leaders is high | 0,09 | 3 | 0,28 | It is the local wisdom of the people to obey the Kasepuhan leaders |
| 6. Have local wisdom in the concept of self-sufficiency in food and forest management. | 0,13 | 4 | 0,5 | No people are starving and the environment is well preserved |
| Sub Total | 0,62 | | 2,13 | |
| Weakness : | | | | |
| 1. The people education is low | 0,09 | 3 | 0,28 | Access and educational facilities are limited |
| 2. Rejection of the forest management programs | 0,09 | 3 | 0,28 | Because they are against traditional rules |
| 3. Indigenous people do not understand the importance of forest conservation. | 0,09 | 3 | 0,28 | Because the level of knowledge about conservation is minimum. Factors in the need for fuel wood and working on agriculture. So the indigenous people entered the forest area |
| 4. There is no legal certainty for indigenous people. | 0,06 | 2 | 0,13 | Being wrong for the people and the government, the people that are entered in the area claiming that indigenous people existed before independence and the conservation rules existed, while the government enforced the rules of law |
| 5. Dualism of leaderships | | | | Cause a conflict of interest between |
| in one region. | 0,03 | 1 | 0,03 | the two leaderships because it includes power in the same region. |
| Sub Total | 0,38 | | 1,00 | |
| Total | 1,00 | _ | 3,13 | |

Based on the table 1 the strengths factors have score of 2.13 while the weaknesses factors have a score of 1.00.

The Kasepuhan leaders situational leaderships have higher strength than the weakness factor in implementing forest management programs.

3.2. Weight Analysis and External Ratings Factory Analysis Strategy (EFAS)

The Weight and EFAS of Situational Leadership Strategy for Forest Management in the Halimun Salak Mountain Area is in the Table 2.

| External Strategic Factors | Weight | Rate | X Rating Weight | Comment |
|-----------------------------------------------------------------------------------------------------------------------------------|--------|------|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Opportunity: | | | | |
| 1. Indigenous people can manage their own customary forests with ulayat rights *. | 0,14 | 3 | 0,41 | Because it has a legal basis. It is from the decision of the Constitutional Court No. 35 / PUU- X / 2012 concerning the procedures, regulation, mastery and use of Ulayat Rights, it is only constrained by the Regional Regulation that must be issued |
| 2. Making Kasepuhan a place for cultural and agricultural tourism. | 0,18 | 4 | 0,73 | Because the Kasepuhan indigenous people maintain unique local wisdom such as the existence of seren taun (harvest feasts) |
| 3. Develop the concept of indigenous community forest management according to customary rules. | 0,09 | 2 | 0,18 | Indigenous peoples have rules in forest zoning. They are tatupan forests (Protection Forests), titipan (Forests for housing needs), cawisan (Forest reserves) and arable land (Agricultural Land). |
| 4. The government partners with kasepuhan leaders in protecting the forest by empowering indigenous people to protect the forest. | 0,18 | 4 | 0,73 | In the institution of Kasepuhan there are parts that protect their forests insitatively to control their customary forests |
| Sub Total | 0,59 | | 2,05 | |
| Threat : | | | | |
| 1.Conflictofinterestbetweenpartnershipandthe | 0,14 | 3 | 0,41 | There are dualisms of formal and informal leaderships in one area and |

Table 2: Weight Analysis and Factory Analysis Strategy External Ratings (EFAS)

| External Strategic Factors | Weight | Rate | X Rating Weight | Comment |
|-------------------------------|--------|--------|--------------------|----------------------------------------|
| government in managing Forest | | | | have the same interests with |
| Resources | | | | different objectives. Indigenous |
| | | | | peoples claim that the forest belongs |
| | | | | to indigenous people because they |
| | | | | existed before this country existed, |
| | | | | then their livelihood was the only |
| | | | | farm in cultivation which was also a |
| | | | | conservation area, while the |
| | | | | government enforced the law |
| 2. Indigenous peoples lose | | | | The people that are prohibited by |
| their livelihoods | | | | law from farming in the National |
| | 0,14 | 3 | 0,41 | Park area, the people will reduce the |
| | | | | source of their livelihoods and result |
| | | | | in the welfare of the people. |
| 3. Abandonment of State | 0.05 | 1 | 0.05 | Assume the government does not |
| law | 0,05 | 1 | 0,05 | pay attention to rural people. |
| 4. Rejection of forestry | 0.00 0 | r | 0.19 | Because the program is contrary to |
| programs | 0,09 | 2 0,18 | | local customary rules. |
| Sub Total | 0,41 | | 1,05 | |
| Total | 1,00 | _ | 3,1 | |

Ulayat rights are authority, which, according to customary law, is owned by customary communities over certain areas which are the environment of their citizens, where this authority allows the community to take advantage of natural resources, including land, within the area. Furthermore, in table 2, opportunity factors have score of 2.05 and the threats factors have score of 1.05. The results indicate the forest management has a considerable opportunity compared to the threat that will emerge, as in the table 3:

Table 3: Recapitulation of Scores IFAS and EFAS

| Internal Score | Eksternal Score | Alternative Strategy | |
|----------------|-----------------|----------------------|--|
| S > W (+) | O > T (+) | Growth | |
| 2,13 > 1,00 | 2,05 > 1,05 (+) | Glowin | |
| S < W (-) | O < T (-) | Survival | |
| S > W (+) | O < T (-) | Diversification | |
| S > W (-) | O > T (+) | Stability | |

Source: Research Results, 2018

In determining a more specific alternative strategy of the value obtained, it is included in the alternative strategy chart, because the results from table 3 will be seen later that from the existing score leads to the choice of growth strategy then determines a more specific growth strategy. From this score shows strengths are greater than opportunities, so the results can be seen in the Figure 1:

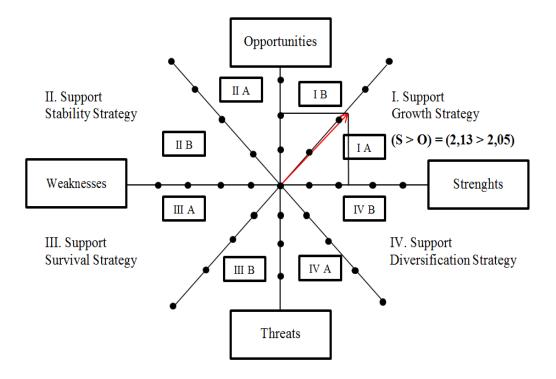

Figure 1: The Chart of SWOT Analysis of Situational Leadership in Forest Management

Furthermore, the strengths, weaknesses, weight calculations and IFAS Leadership Situational Leadership Management for Forest Management stated show in table 5.

| Internal Strategic Factors | Weight | Rate | X Rating Weight | Comment |
|-------------------------------------------------------------------------------------------------------------|--------|------|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Strength: | | | | |
| 1. The Village Head has leadership with a high level of delegation style. | 0,14 | 4 | 0,57 | Divide tasks to subordinates and entrust the Village secretary to manage them, the Village Head Focuses on the affairs of the people and their development. |
| 2. The Village Head has access to village financial management, administrative area access, access to | 0,14 | 4 | 0,57 | The Village Head as a formal leader has the power that is obliged to manage all access properly for the people welfare. |

Table 5: Calculation of Weight and IFAS Rate of Situational Leadership in Forest Management

| Internal Strategic Factors | Weight | Rate | X Rating Weight | Comment |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|------|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| relations with the local government and access to territorial information. | | | | |
| 3. Having access to the implementation of Forestry Programs or others that come from the Central Government and the Regions. | 0,11 | 3 | 0,32 | The Village Government as the spearhead of political power in Indonesia country has good access from the central and regional governments as the end of implementing programs from the central government to the villages |
| 4. Sinar Resmi Village is a lot of research destination, Community Service Program (KKN), a cultural tourism destination, both local and foreign. | 0,11 | 3 | 0,32 | Because Sinar Resmi Village has a unique area, which has 3 cultural reserves. They are Kasepuhan Cipta Gelar, Cipta Mulya and Sirna Resmi and is in the HSMNP area |
| 5. The Village Head is from a Kasepuhan member | 0,03 | 1 | 0,03 | The majority of village residents are indigenous people, so when village heads come from members of the Kasepuhan, village heads and custom can influence each others access to achieve their respective goals more easily. |
| Sub Total | 0,53 | | 1,82 | |
| Weakness : | | | | |
| 1. The Village Head does not have access to managing the forest directly. | 0,11 | 3 | 0,32 | ForestPlanningandManagementPolicies are in theProvincialandCentralGovernment |
| 2. The maturity level of employees and the public is low. | 0,11 | 3 | 0,32 | Village officials since the change of leadership in October 2017 have been restructured as a whole, so they need adaptation. |
| 3. Access and health facilities, education and public purchasing power is limited. | 0,11 | 3 | 0,32 | Sinar Resmi Village is a village with a low level of welfare because of its access to the capital city district is far and |

| Internal Strategic Factors | Weight | Rate | X Rating Weight | Comment |
|-------------------------------------|--------|------|--------------------|------------------------------------|
| | | | | access to public transportation to |
| | | | | the location is limited, and a |
| | | | | traditional lifestyle |
| 4. The Village Head does not | | | | Indigenous people are more |
| have full access to compliance from | | | | obedient to traditonal leaders |
| the people. | 0,07 | 2 | 0,14 | than village heads, so the village |
| | 0,07 | | | head to get obedience from the |
| | | | | people must go through |
| | | | | Kasepuhan leaders |
| 5. Village Institutional Capacity | | | | In quantity and quality, village |
| is inadequate. | | | | officials have limitations in the |
| | | | | transition period of leadership, |
| | 0,07 | 2 | 0,14 | especially with the presence of |
| | | | | village funds needed by |
| | | | | employees who are experts in |
| | | | | managing finances |
| Sub Total | 0,47 | | 1,25 | |
| Total | 1,00 | _ | 3,07 | |

Based on the table 5 the strengths factors have score 1.82 and the weaknesses factors have score 1.25. This means the village head Situational Leadership has higher strength than the weakness factor in implementing forest management programs. Furthermore, the table 6, the opportunity factors have score 1.75 and threats factors have score 1.08. These results indicate the opportunities for forest management have considerable opportunity compared to threats that appear in the table 6.

Table 6: Weight and Rating Calculation EFAS Situational Management of Forest Management

4. Discussion

Previous research carried out [3] focused on the adaptation strategies of local people for sustainable forest resource governance, as seen from aspects of accountability, fairness, participation and transparency. In this resarch shows:

1. From the accountability aspect shows that the implementation of sustainable forest governance planning from the employee rate has score 3.04 with fairly good interpretation criteria, while the non-

customary people have score 3.69 with good interpretation criteria, meanwhile, indigenous people have scores 2.68 with sufficient interpretation criteria.

- 2. From the aspect of fairness, the presence or absence of a fair conflict resolution Mechanism indicates the employee assesses have score 3.67 with the criteria of interpretation, while the non-indigenous people have scores 3.8 with the criteria of good interpretation, meanwhile, from the indigenous kasepuhan people have score 2.85 with sufficient interpretation criteria
- 3. From the aspect of participation, the process of stakeholder involvement in the making and implementation of forest governance shows that from the employee rate has score of 4 with good interpretation criteria, while from non-indigenous people have score of 3.6 with good interpretation criteria, meanwhile, from the party of the indigenous peoples have score of 2.88 with sufficient interpretation criteria
- 4. From the transparency aspect the process of conveying activities carried out by the state to outsiders, it shows that the employee judges has score 3.5 with good interpretation criteria, while from non-indigenous people have score 3.69 with good interpretation criteria, meanwhile, from the side of the indigenous people have score 2.49 with sufficient interpretation criteria.

Furthermore, the researchers focused on situational leadership in forest management through SWOT analysis. The research shows:

- 1. Based on the analysis that has been done shows that the strengths factors have score 2.13 while the weaknesses factors have score 1.00. This means the traditional head Situational Leadership has higher strength than the weakness factor in implementing forest management programs.
- 2. The results of the research also showed the opportunity factors have score 2.05 and the threats factors have score 1.05. The results indicate the forest management has significant opportunity compared to the threat that will arise.
- 3. In determining more specific alternative strategy of the values obtained, it shows from the existing score leads to the choice of growth strategy then determines more specific growth strategy. From this score showed the strengths are greater than opportunities.

4. Conclusion

The results of the research showed the SWOT analysis of Situational Leadership in Formal and Informal Governments had an internal score strengths greater than weaknesses and external score. The opportunities are greater than threats. Furthermore, the comparison of internal and external scores of strengths and opportunities both formal and informal leadership have strength score greater than the opportunity score 2.13> 2.05 for Informal leadership and 1.82> 1.75 for Formal leadership which they are in strong and high position because they are in quadrant I and an alternative strategy with a Growth Strategy
