Bibliometric analysis using data on the number and authors of scientific publications as well as articles and citations in them aims to measure the outcomes of researchers, institutions, and countries, in order to identify national and international networks and map the development of new (multidisciplinary) fields of science and technology, this is also known as known as Scientometrics. While, VOSviewer is software for analyzing bibliometrics in order to find research novelties that have not yet appeared in the realm of science and knowledge. This study aims to analyze waqf education on Google Scholar from 2019 to 2022. This study aims to analyze the bibliometrics of waqf education on the Google Scholar data research. The research method used is using the publish and perish application to collect reference data for the last four years from 2019 to 2022. Then use the VOSviewer application to analyze the bibliometrics by referring to the results generated from the publish and perish application in the form of \*.ris and \*.xls files. The research findings show that there were 494 publications during the last four years for the 2019-2022 period in the field of waqf education with a total of 734 citations. As for the number of interconnection relationships between terminology in the existing research, it was found that the strongest number of relationships was term waqf of 356, cash waqf of 114, asset of 96, waqf of fund 75, and manager of 73. While the number of frequencies that frequently appeared was term waqf as much as 252 times, Cash waqf 71 times, asset 55 times, land waqf 41 times, and manager 36 times.

**Commented [U1]:** Tahun pengamatan dari GS nya wajib diperpanjang misal: 2018 sampai pertengahan tahun 2023, paling tidak untuk menunjukkan ini original

**Commented [U2]:** Cukup 150 kata

## INTRODUCTION

Waqf and Education are two interrelated terms within the scope of Islamic Education filed, this is related to the main figure in waqf management, namely Nazir<sup>1</sup>. Nazir's profession should be in the same position as professionals such as legal experts, public accountants, bankers, or investors<sup>2</sup>. Therefore, a nazir waqf professional education program is needed, more specifically the curriculum for this program.

The question is, how much research related to waqf directly intersects with the area of educational research? To address this question, an analysis of curriculum development, competency qualification framework, and professional education programs can be used.

Regarding nazir issue, waqf management should be in the form of a charitable organization that is independent, professional, trustworthy and focused on productive waqf forms<sup>3</sup>, because there are many waqf management<sup>4</sup> and use of waqf income for the development of higher education<sup>5</sup> and also waqf in the health care system can increase social benefits for poor and needy patients<sup>6</sup>. Increasing Nazir competence in the development of productive waqf is not only to be knowledgeable in fiqh, but also has to be equipped with business management and entrepreneurship competencies, because it will develop and empower waqf assets to be more productive<sup>7</sup>.

**Noted:**

1. Perhatikan cara menulis main idea dalam paragraph upayakan menulis antar paragraph terdapat kesinambungan koherens menulis dengan paragraf sebelumnya
2. Belum ada novelty dari riset ini, sebaiknya meskipun ini sifatnya literature review tp bs perkuat lagi hal apa yg mnjd spesifikasi riset anda ini dibanding riset yg ditulis dengan metodeologi yg sama (deskriptif kualitatif berbasis riset terdahulu dengan Vosviewer), kemudian lengkapi riset teraktual supaya area gap riset bisa dielaborasi dan ada originalitynya.

## LITERATURE REVIEW

In mapping publications in the fields of waqf and education, bibliometric data analysis has recently been conducted. This analysis is very interesting, because it can be clearly visualized and in line with current research developments. Visualizing the data is a mapping of existing forms of research. One of the mapping tools that can be used is VOSviewer which is software for mapping bibliometric data analysis. Several types of bibliometric mapping can be performed with VOSviewer including co-authorship maps, citation maps, co-citation maps, bibliographic coupling maps, and co-occurrence maps.

Bibliometric analysis using data on the number and authors of scientific publications as well as articles and citations in them aims to measure the outcomes of researchers, institutions, and countries, in order to identify national and international networks and map the development of new (multidisciplinary) fields of science and technology, this is also known as Scientometrics<sup>8</sup>.

It was found that many affiliations, countries/regions, and research communities that contributed to research on waqf and its affiliates of co-occurring analyzes of bibliographic information from articles were collected. Several studies on bibliometric analysis have been done in various fields and methodologies, including waqf research, such as A bibliometric Review of the Waqf literature<sup>9</sup>, Bibliometric assessment of scholarly publications on waqf or Islamic endowment<sup>10</sup> and Islamic Social Finance: A Bibliometric Analysis<sup>11</sup>. The study on bibliometric analysis is fundamental in detailing the theoretical literature and developing an integrated theoretical framework on quality of

**Commented [U3]:** Literatur review merupakan survei artikel ilmiah, buku, dan sumber-sumber lain yang relevan dengan bidang penelitian. Kajian ini harus memberikan dasar teoritis untuk penelitian dan membantu Anda menentukan sifat penelitian

higher education<sup>12</sup>. This review provides reference points for entry into this interdisciplinary field<sup>13</sup>.

However, from these previous studies, there has been no research that discusses bibliometric analysis with the mapping analysis method in educational research in the area of waqf for the last four years. The tool used is VOSviewer<sup>14</sup> to obtain information about the development and novelty of research<sup>15</sup> that has been conducted. Therefore, this research was designed for reviewing the development of research from the field of waqf education for the last four years (2019 to 2022) in the scope of Google Scholar data.

## METHODS

The article data used in this study is based on research from publications that have been registered on Google Scholar Indexing<sup>16</sup>. The Google Scholar search database was used in this study because it can be accessed free of charge.

To collect research data, the Publish or Perish<sup>17</sup> reference manager tools were used<sup>18</sup>. Data collection was conducted in November 2022. The data were reviewed and selected according to the context relevant to the determination of keywords that matched the search for the themes needed in this research, then backed up into a file that would be retrieved through VOSviewer<sup>19</sup>.

Each article was checked for this research and articles related to education were selected. The keywords chosen are "Waqf" and "Education" for the Publish or Perish application and then filtered by title and abstract. As a result, 494 publications during the last four years for the 2019-2022 period with a total of 734 citations.

The articles used in this study were published between 2019 and 2022. After that, the article is saved in \*.ris format. Then, in the form of a bibliometric map, VOSviewer is used to visualize and analyze trends. filtered terms will be included in the VOSviewer network mapping visualization. The article data is mapped using the source database that has been generated. There are three forms of data mapping: network visualization, density, and overlay<sup>20</sup>.

## RESULT AND DISCUSSION

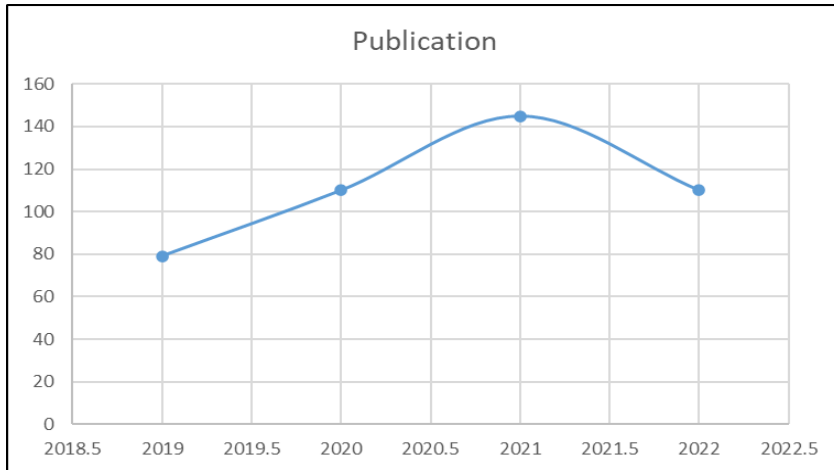

The growth curve for research on waqf education from 2019 to 2022 is shown in Figure 1. According to Figure 1, the number of publications published in educational research has increased from 79 to 110 in the last four years i.e., from 2019 to 2022. The year with the highest total was 145 in 2021. In 2020 and 2022 there were have a same number of 110 articles.

**Commented [U5]:** 1. sesuaikan dengan perluasan tahun pengamatan artikel bebrbasis Vosviewer  
2. Diskusi atau pembahasan memuat implikasi temuan, dan relevansi hasil dengan penelitian sebelumnya.

---

<sup>20</sup> Husaeni and Nandiyanto, "Mapping Visualization Analysis of Computer Science Research Data in 2017-2021 on the Google Scholar Database with Vosviewer."

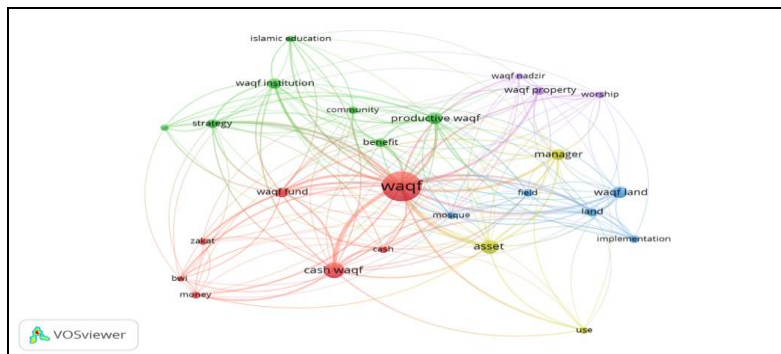

**Figure 1. Level of Development on Waqf Educational Research**

Mapping analysis was conducted to show the relationship between the terms contained in the educational research using waqf as a secondary keyword. Each connection is described in the network visualization. Several provisions are applied in the screening of terms in waqf education. The minimum number of occurrences of a term is 10 times. Thus, out of 2756 terms found, only 25 terms were used in visualizing publication data.

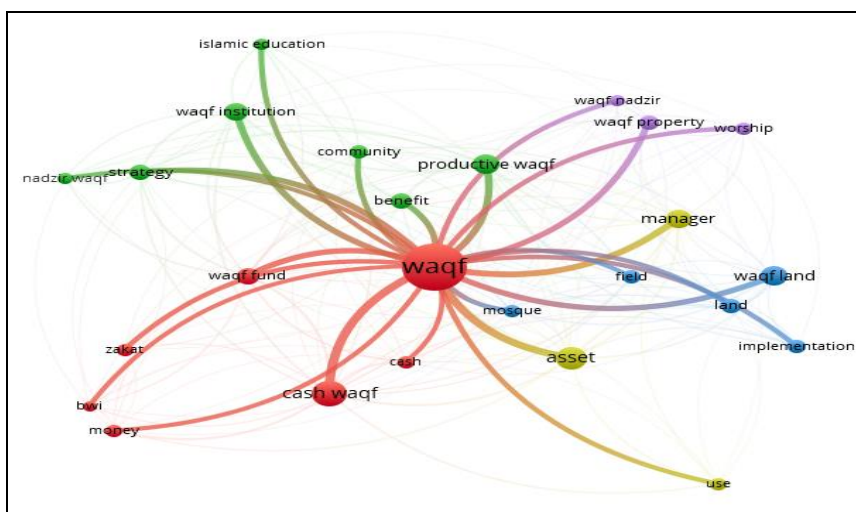

The visualization network shows the relationships between the displayed terms. The interrelationships between concepts are depicted in Figure 2. In network visualization, relationships are represented by networks or lines connecting terms. Clusters of terms in nazir waqf educational research are depicted in Figure 2.

**Figure 2. Network Visualization of Waqf Educational Research**

This study's network visualization is separated into several clusters (see Figure 3):

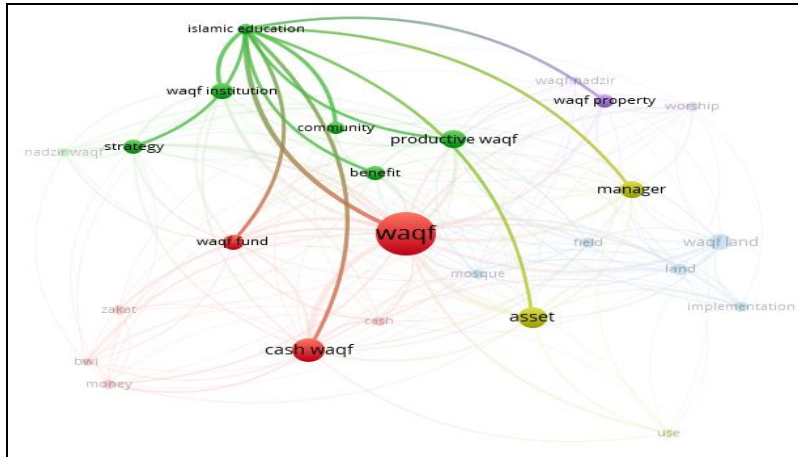

- (i) Cluster 1 has 7 items, the items are BWI, cash, cash waqf, money, waqf, waqf fund, and zakat.
- (ii) Cluster 2 has 7 items, the items are benefit, community, Islamic education, nazir waqf, productive waqf, strategy, waqf institution.
- (iii) Cluster 3 has 6 items, the items are accordance, field, implementation, land, mosque, waqf land.
- (iv) Cluster 4 has 3 items, the items are waqf nazir, waqf property, worship.
- (v) Cluster 5 has 3 items, the items are asset, manager, use.

**Figure 3. Network Visualization of Waqf Term**

From the network visualization data, it is known that waqf education is related to many terms. The term waqf is included in cluster 1 with a total of 25 links and a total strength of 363 links and occurs 252 times. Figure 3 shows several terms connected with the term waqf, namely Islamic education, waqf institution, waqf nazir, waqf property, worship, community, nazir waqf, strategy, productive waqf, benefit, manager, waqf fund, field, waqf land, zakat, cash, mosque, implementation, asset, BWI, money, and use.

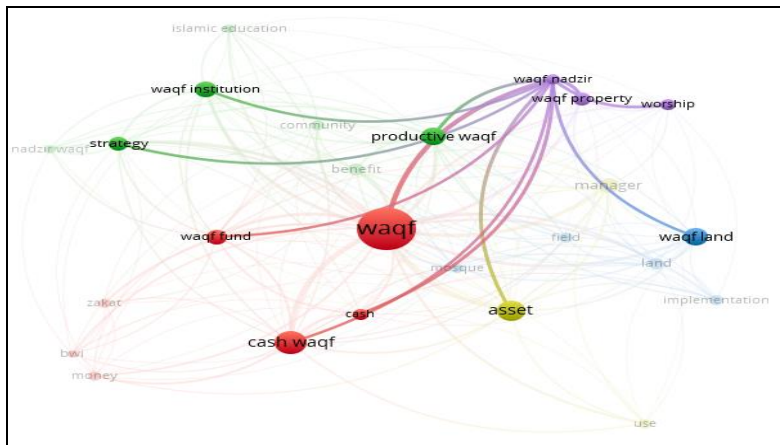

As waqf is one of the learning contents within the scope of Islamic education, it is found that the connected terms of Islamic education as below:

**Figure 4. Network Visualization of Islamic Education Term**

The term Islamic Education is included in cluster 2 with a total of 12 links and a total strength of 27 links. Figure 4 shows several terms connected with the term waqf, namely waqf property, waqf institution, strategy, community, productive waqf, benefit, manager, waqf fund, waqf, cash waqf, dan asset.

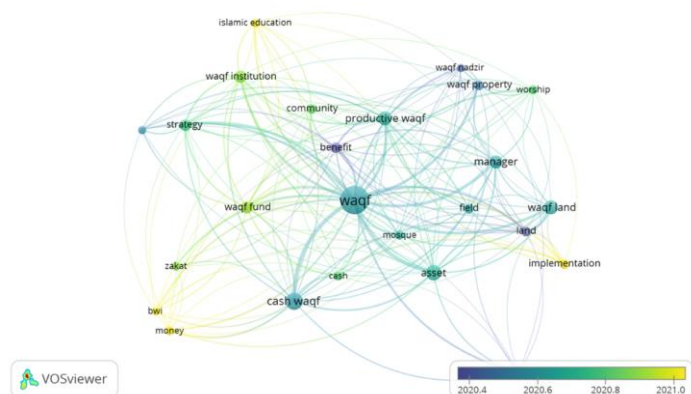

As the third concept in waqf education, it is found the connected terms in the item nazir (Figure 5):

**Figure 5. Network Visualization of Nazir Term**

The term nazir is included in cluster 2 with a total of 10 links and a total strength of 28 links. Figure 5 shows some terms connected with the term nazir,

namely waqf institution, waqf property, worship, strategy, productive waqf, waqf, waqf fund, waqf land, cash, cash waqf, and asset.

**Figure 6. Overlay Visualization of Waqf Education Research**

In an overlay visualization, the color of a node indicates certain properties of that node. For example, a node can represent a journal and the color of a node can indicate how many times the journal has been cited<sup>21</sup>.

Figure 6 shows that the yellow or light color illustrates the novelty and the recent topics and terms used in waqf education research, namely: BWI, money, zakat, cash waqf, and Islamic education. While the blue or dark color indicates the publication of research articles is getting closer to the previous year to 2020, such as terms of waqf, land managers, mosques, assets, and cash waqf.

9	14	<i>Zakat, Waqf</i>	2020	<a href="https://dspace.uui.ac.id/handle/123456789/29980">https://dspace.uui.ac.id/handle/123456789/29980</a>
10	13	<i>Management, Asset, Waqf</i>	2020	<a href="http://repository.unissula.ac.id/id/eprint/24769">http://repository.unissula.ac.id/id/eprint/24769</a>

The most cited work in waqf educational research base on google scholar data research found that the keywords are: strategy, cash waqf, waqf, sukuk, Islamic economy, bank waqf, poverty, productive waqf, zakat, management and asset.

Table 2 shows the 10 highest terms connected to the waqf education term, namely waqf, cash waqf, asset, waqf fund, manager, waqf institution, strategy, waqf land, benefit, and waqf property. The highest correlation is

found in the relationship between waqf education and waqf with a total link strength of 356. The relationship between waqf education and cash waqf with a total link strength of 114. The relationship between waqf education and asset with a total link strength of 96. The relationship between waqf education and waqf fund with a total link strength of 75. The relationship between waqf education and manager with a total link strength of 73. The relationship between waqf education and waqf institution with a total link strength of 65. The relationship between waqf education and strategy with a total link strength of 63. The relationship between waqf education and waqf land with a total link strength of 57. The relationship between waqf education and benefit with a total link strength of 52. The relationship between waqf education and waqf property with a total link strength of 42.

**Figure 8. Number of Interconnected Relationships the Strongest Terms During 2019 – 2022 on the Google Scholar Publications**

From the figure 8 can be seen that publications with the term waqf show the highest level with 356 publications. However, there are not many articles that link the main actor in waqf, namely nazir as the manager who is responsible for the sustainability of waqf. Indeed, there is the term manager for 73 publications, but this is not solely associated with understanding the meaning of nazir, it could mean waqf managers who are not nazir or other people employed by nazir as managers, for example, articles *Overlapping Fungsi Baitul Mal dan Kantor Urusan Agama sebagai Lembaga Pengelola Wakaf (Kritik terhadap Peran Baitul Mal sebagai Lembaga Pengelola Wakaf di Aceh)*<sup>23</sup>.

## CONCLUSION

<sup>23</sup> M.A Hidayatina and A Muhayatsyah, "Overlapping Fungsi Baitul Mal Dan Kantor Urusan Agama Sebagai Lembaga Pengelola Wakaf (Kritik Terhadap Peran Baitul Mal Sebagai Lembaga Pengelola Wakaf Di Aceh)," *INFERENSI: Jurnal Penelitian Sosial Keagamaan* 13, no. 2 (2019): 329-350.

**Commented [U6]:** harus menjawab tujuan riset ini yang mestinya diperjelas pada poin pendahuluan

This study aims to analyze the bibliometrics of waqf education on the Google Scholar data research using Harzing's Publish or Perish and VOSviewer software for mapping analysis. The results show that there were 494 publications during the last four years for the 2019-2022 period in the field of waqf education with a total of 734 citations. As for the number of interconnection relationships between terminologies in the existing research that the strongest number of relationships was term waqf of 356, cash waqf of 114, asset 96, waqf of fund 75, and manager of 73. While the frequently appeared was term waqf as much as 252 times, Cash waqf 71 times, asset 55 times, land waqf 41 times, and manager 36 times. The highest correlation is found in the relationship between waqf education and the term waqf. From the search results for Google Scholar data, no research has been found on Nazir's education, which is closely related to the topic of law and education. So, it is suggested to carry out further research related to the curriculum of the Nazir profession in the development of waqf.

#### Author's Contribution:

#### Acknowledgements

The authors would like to thank The Chancellor of Djuanda University for providing the opportunity and convenience in this research process.

#### Declaration of Competing Interest

We declare that we have no conflict of interest.

Bibliometric analysis using data on the number and authors of scientific publications as well as articles and citations in them aims to measure the outcomes of researchers, institutions, and countries, in order to identify national and international networks and map the development of new (multidisciplinary) fields of science and technology, this is also known as known as Scientometrics. This study analyzes bibliometrics of waqf education on Google Scholar from 2019 to 2023. The research used the publish and perish application to collect reference data and use the VOSviewer software to analyze the data. The findings show 494 publications and 734 citations in the field of waqf education from 2019-2023. The strongest interconnection relationships were found between term waqf, cash waqf, asset, fund waqf, and manager. The terms that are often found in relation to educational publications and waqf include waqf, cash waqf, property, land waqf, and management..

**Commented [U1]:** Tahun pengamatan dari GS nya wajib diperpanjang misal: 2018 sampai pertengahan tahun 2023, paling tidak untuk menunjukkan ini original

**Commented [RR2R1]:** Benar, sesungguhnya waktunya dimulai sejak tahun 2019 hingga 2023.

### INTRODUCTION

Waqf and Education are two interrelated terms within the scope of Islamic Education filed, this is related to the main figure in waqf management, namely Nazir<sup>1</sup>. Nazir's profession should be in the same position as professionals such as legal experts, public accountants, bankers, or investors<sup>2</sup>. The curriculum for nazir, who is in charge of waqf issues, is therefore required for a nazir waqf professional education program. The question is, how much research related to waqf directly intersects with the area of educational

<sup>1</sup> Arridho Harahap and Moh. Nurul Qomar, "Waqf Management: A Bibliometric Review," *Ziswaf: Jurnal Zakat Dan Wakaf* 9, no. 1 (2022): 59.

<sup>2</sup> Najim Nur Fauziah, "Developing Cash Waqf Model as an Alternative Financing for Social Enterprises to Support Decent Work and Economic Growth in Indonesia," *Turkish Journal of Islamic Economics* 8, no. Special Issue (2021): 195-217.

research? To address this question, an analysis of curriculum development, competency qualification framework, and professional education programs can be used.

Regarding nazir issue, waqf management should be in the form of a charitable organization that is independent, professional, trustworthy and focused on productive waqf forms<sup>3</sup>, because there are many waqf management<sup>4</sup> and use of waqf income for the development of higher education<sup>5</sup> and also waqf in the health care system can increase social benefits for poor and needy patients<sup>6</sup>. Increasing Nazir competence in the development of productive waqf is not only to be knowledgeable in *fiqh*, but also has to be equipped with business management and entrepreneurship competencies, because it will develop and empower waqf assets to be more productive<sup>7</sup>.

Professionally, a Nazir who manages waqf should be able to develop the sustainability of waqf productivity. However, on the contrary, many waqfs, especially land waqfs, have become neglected due to complex problems, including the inadequate competence of nazir. This gap then makes researchers interested in discovering what things can be known in order to improve Nazir competence through Nazir education.

This issue can be explored through one method, namely initial identification in the form of bibliometric analysis in the past few years by detecting scientific publications in the field of waqf education, so that we can find out what has happened related to the waqf issue.

This research aims to analyze waqf education bibliometrics in Google Scholar data research using Harzing's Publish or Perish software and VOSviewer for mapping analysis. Then the research questions appear are; how many publications about education linked with the term of waqf in the last five years of the 2019-2023 period? and how many publications were cited? What is the number of strongest interconnection relationships in each term? What terminology appears most frequently in connection with waqf publications? Is there a correlation between waqf education and the term waqf?

## LITERATURE REVIEW

**In mapping publications** in the fields of waqf and education, bibliometric data analysis has recently been conducted. This analysis is very interesting, because it can be clearly visualized and in line with current research developments. Visualizing the data is a mapping of existing forms of research. One of the mapping tools that can be used is VOSviewer which is software for mapping bibliometric data analysis. Several types of bibliometric mapping can be performed with VOSviewer including co-authorship maps, citation maps, co-citation maps, bibliographic coupling maps, and co-occurrence maps.

Bibliometric analysis using data on the number and authors of scientific publications as well as articles and citations in them aims to measure the outcomes of researchers, institutions, and countries, in order to identify national and international networks and map the development of new (multidisciplinary) fields of science and technology, this is also known as Scientometrics<sup>8</sup>.

It was found that many affiliations, countries/regions, and research communities that contributed to research on waqf and its affiliates of co-occurring analyzes of bibliographic information from articles were collected. Several studies on bibliometric analysis have been done in various fields and methodologies, including waqf research, such as A Bibliometric Review of the

<sup>8</sup> Dankul Lou et al., "Global Trends of Indocyanine Green Fluorescence Navigation in Laparoscopic Cholecystectomy: Bibliometrics and Knowledge Atlas Analysis," *Surgical Endoscopy* 36, no. 9 (2022): 6419–6431.

**Commented [U3]:** Literatur review merupakan survei artikel ilmiah, buku, dan sumber-sumber lain yang relevan dengan bidang penelitian. Kajian ini harus memberikan dasar teoritis untuk penelitian dan membantu Anda menentukan sifat penelitian

**Commented [RR4R3]:** sudah disesuaikan, terutama pada paragraph ketiga

Waqf literature<sup>9</sup>, Bibliometric assessment of scholarly publications on waqf or Islamic endowment<sup>10</sup>, Islamic Social Finance: A Bibliometric Analysis<sup>11</sup> and also the issue of Waqf Literacy<sup>12</sup>. The study on bibliometric analysis is fundamental in detailing the theoretical literature and developing an integrated theoretical framework on quality of higher education<sup>13</sup>. This review provides reference points for entry into this interdisciplinary field<sup>14</sup>.

However, from these previous studies, there has been no research that discusses bibliometric analysis with the mapping analysis method in educational research in the area of waqf for the last five years. The tool used is VOSviewer<sup>15</sup> to obtain information about the development and novelty of research<sup>16</sup> that has been conducted. Therefore, this research was designed for reviewing the development of research from the field of waqf education for the last five years (2019 to 2023) in the scope of Google Scholar data.

## METHODS

The article data used in this study is based on research from publications that have been registered on Google Scholar Indexing<sup>17</sup>. The Google Scholar search database was used in this study because it can be accessed free of charge.

To collect research data, the Publish or Perish<sup>18</sup> reference manager tools were used<sup>19</sup>. The data were reviewed and selected according to the context

relevant to the determination of keywords that matched the search for the themes needed in this research, then backed up into a file that would be retrieved through VOSviewer<sup>20</sup>.

Each article was checked for this research and articles related to education were selected. The keywords chosen are “Waqf” and “Education” for the Publish or Perish application and then filtered by title and abstract. As a result, 494 publications during the last five years for the 2019-middle year of 2023 period with a total of 734 citations.

The articles used in this study were published between 2019 and 2023. After that, the article is saved in \*.ris format. Then, in the form of a bibliometric map, VOSviewer is used to visualize and analyze trends. filtered terms will be included in the VOSviewer network mapping visualization. The article data is mapped using the source database that has been generated. There are three forms of data mapping: network visualization, density, and overlay<sup>21</sup>.

## RESULT AND DISCUSSION

The growth curve for research on waqf education from 2019 to the middle of year 2023 is shown in Figure 1.

**Commented [U5]:** wajib diperluas dari 2018-middle year of 2023

<sup>21</sup> Husaeni and Nandiyanto, “Mapping Visualization Analysis of Computer Science Research Data in 2017-2021 on the Google Scholar Database with Vosviewer.”

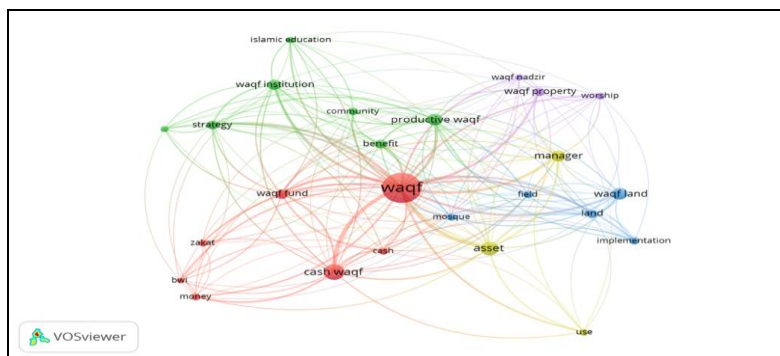

**Figure 1. Level of Development on Waqf Educational Research**

According to Figure 1, the number of publications published in educational research has increased from 79 to 110 in the last five years i.e., from 2019 to 2023. The year with the highest total was 145 in 2021. In 2020 and 2023 there were have a same number of 110 articles.

Mapping analysis was conducted to show the relationship between the terms contained in the educational research using waqf as a secondary keyword. Each connection is described in the network visualization. Several provisions are applied in the screening of terms in waqf education. The minimum number of occurrences of a term is 10 times. Thus, out of 2756 terms found, only 25 terms were used in visualizing publication data.

The visualization network shows the relationships between the displayed terms. The interrelationships between concepts are depicted in Figure 2. In network visualization, relationships are represented by networks or lines connecting terms. Clusters of terms in nazir waqf educational research are depicted in Figure 2.

### Figure 2. Network Visualization of Waqf Educational Research

This study's network visualization is separated into several clusters (see Figure 3):

- (i) Cluster 1 has 7 items, the items are BWI, cash, cash waqf, money, waqf, waqf fund, and zakat.
- (ii) Cluster 2 has 7 items, the items are benefit, community, Islamic education, nazir waqf, productive waqf, strategy, waqf institution.
- (iii) Cluster 3 has 6 items, the items are accordance, field, implementation, land, mosque, waqf land.
- (iv) Cluster 4 has 3 items, the items are waqf nazir, waqf property, worship.
- (v) Cluster 5 has 3 items, the items are asset, manager, use.

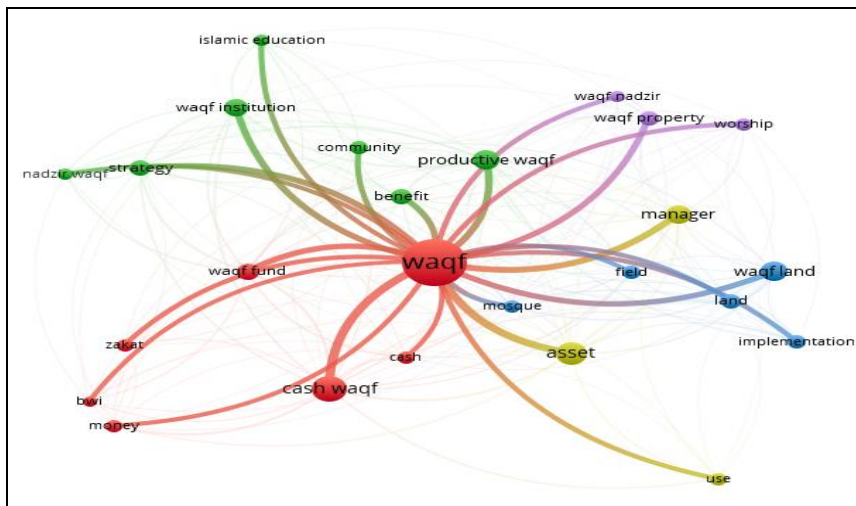

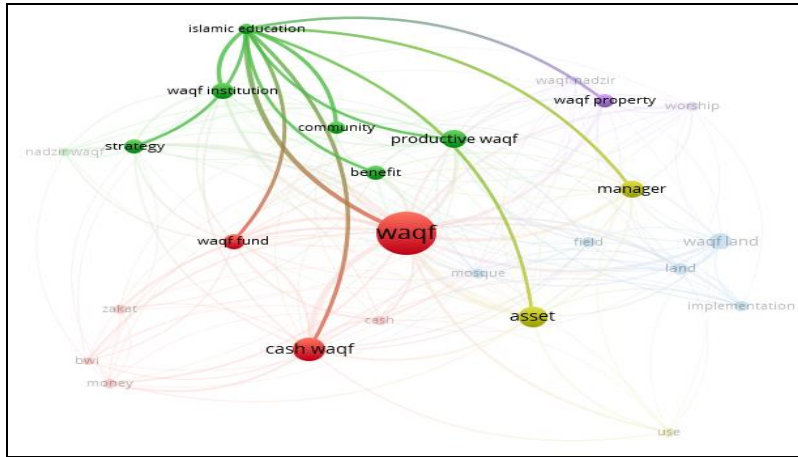

Figure 3. Network Visualization of Waqf Term

From the network visualization data, it is known that waqf education is related to many terms. The term waqf is included in cluster 1 with a total of 25 links and a total strength of 363 links and occurs 252 times. Figure 3 shows several terms connected with the term waqf, namely Islamic education, waqf institution, waqf nazir, waqf property, worship, community, nazir waqf, strategy, productive waqf, benefit, manager, waqf fund, field, waqf land, zakat, cash, mosque, implementation, asset, BWI, money, and use.

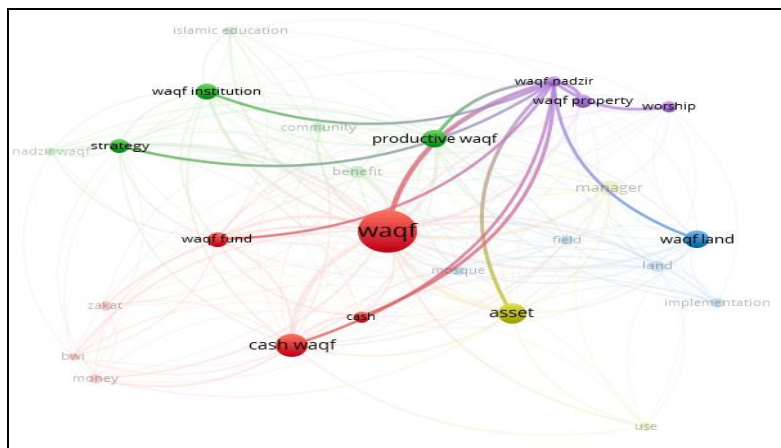

As waqf is one of the learning contents within the scope of Islamic education, it is found that the connected terms of Islamic education as below:

**Figure 4. Network Visualization of Islamic Education Term**

The term Islamic Education is included in cluster 2 with a total of 12 links and a total strength of 27 links. Figure 4 shows several terms connected with the term waqf, namely waqf property, waqf institution, strategy, community, productive waqf, benefit, manager, waqf fund, waqf, cash waqf, dan asset.

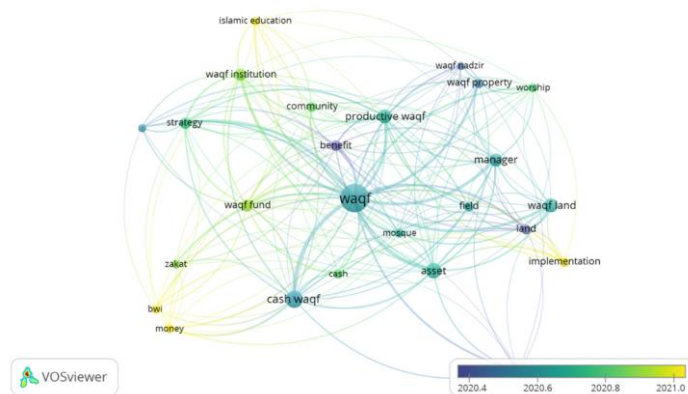

As the third concept in waqf education, it is found the connected terms in the item nazir (Figure 5):

**Figure 5. Network Visualization of Nazir Term**

The term nazir is included in cluster 2 with a total of 10 links and a total strength of 28 links. Figure 5 shows some terms connected with the term nazir,

namely waqf institution, waqf property, worship, strategy, productive waqf, waqf, waqf fund, waqf land, cash, cash waqf, and asset.

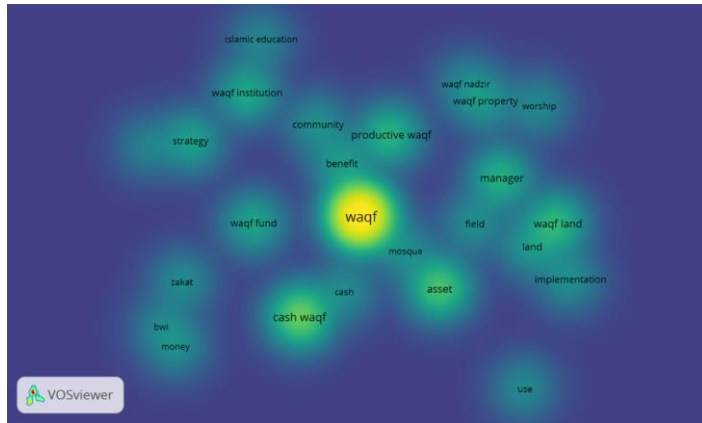

**Figure 6. Overlay Visualization of Waqf Education Research**

In an overlay visualization, the color of a node indicates certain properties of that node. For example, a node can represent a journal and the color of a node can indicate how many times the journal has been cited<sup>22</sup>.

Figure 6 shows that the yellow or light color illustrates the novelty and the recent topics and terms used in waqf education research, namely: BWI, money, zakat, cash waqf, and Islamic education. While the blue or dark color indicates the publication of research articles is getting closer to the previous year to 2020, such as terms of waqf, land managers, mosques, assets, and cash waqf.

<sup>22</sup> Ness van Eck and Ludo Waltman, "Visualizing Bibliometric Networks," in *Measuring Scholarly Impact*, ed. Ying Ding, Ronald Rousseau, and Dietmar Wolfram (Springer US, 2014), 285–320.

**Figure 7. Density Visualization of Waqf Education Research**

In this visualization, color indicates how the nodes are distributed in the underlying two-dimensional space of the visualization. Density visualization allows one to quickly identify dense areas where many nodes are located close to one another<sup>23</sup>.

The density of the number of studies is indicated by the brightness of the color and the relationship between one node and another. In the waqf education researches, it was found that there is an underlying two-dimensional space of the visualization in several terms, such as BWI, money and zakat. In addition, there is a very prominent color dimension, namely the terms waqf, cash waqf, asset and waqf institution.

<sup>23</sup> van Eck and Waltman, "Visualizing Bibliometric Networks."

The most cited work in waqf educational research base on google scholar data research found that the keywords are: strategy, cash waqf, waqf, sukuk, Islamic economy, bank waqf, poverty, productive waqf, zakat, management and asset.

Table 2 shows the 10 highest terms connected to the waqf education term, namely waqf, cash waqf, asset, waqf fund, manager, waqf institution, strategy, waqf land, benefit, and waqf property. The highest correlation is

found in the relationship between waqf education and waqf with a total link strength of 356. The relationship between waqf education and cash waqf with a total link strength of 114. The relationship between waqf education and asset with a total link strength of 96. The relationship between waqf education and waqf fund with a total link strength of 75. The relationship between waqf education and manager with a total link strength of 73. The relationship between waqf education and waqf institution with a total link strength of 65. The relationship between waqf education and strategy with a total link strength of 63. The relationship between waqf education and waqf land with a total link strength of 57. The relationship between waqf education and benefit with a total link strength of 52. The relationship between waqf education and waqf property with a total link strength of 42.

**Figure 8. Number of Interconnected Relationships the Strongest Terms During 2019 – 2023 on the Google Scholar Publications**

From the figure 8 can be seen that publications with the term waqf show the highest level with 356 publications. However, there are not many articles that link the main actor in waqf, namely nazir as the manager who is responsible for the sustainability of waqf. Indeed, there is the term manager for 73 publications, but this is not solely associated with understanding the meaning of nazir, it could mean waqf managers who are not nazir or other people employed by nazir as managers.<sup>24</sup>

## CONCLUSION

Using Harzing's Publish or Perish and VOSviewer software for mapping analysis, this study intends to assess the bibliometrics of waqf education on the

**Commented [U9]:** harus menjawab tujuan riset ini yang mestinya diperjelas pada poin pendahuluan

**Commented [RR10R9]:** sudah disesuaikan dengan tujuan penelitian yang tertulis pada akhir latar belakang

<sup>24</sup> M.A Hidayatina and A Muhayatsyah, "Overlapping Fungsi Baitul Mal Dan Kantor Urusan Agama Sebagai Lembaga Pengelola Wakaf (Kritik Terhadap Peran Baitul Mal Sebagai Lembaga Pengelola Wakaf Di Aceh)," *INFERENSI: Jurnal Penelitian Sosial Keagamaan* 13, no. 2 (2019): 329–350.

Google Scholar data investigation. The results show that there were 494 publications during the last five years for the 2019-2023 period in the field of waqf education with a total of 734 citations. As for the number of interconnection relationships between terminologies in the existing research that the strongest number of relationships was term waqf of 356, cash waqf of 114, asset 96, waqf of fund 75, and manager of 73. While the frequently appeared was term waqf as much as 252 times, Cash waqf 71 times, asset 55 times, land waqf 41 times, and manager 36 times. The highest correlation is found in the relationship between waqf education and the term waqf. From the search results for Google Scholar data, no research has been found on Nazir's education, which is closely related to the topic of law and education. So, it is suggested to carry out further research related to the curriculum of the Nazir profession in the development of waqf.

#### Acknowledgements

The authors would like to thank The Chancellor of Djuanda University for providing the opportunity and convenience in this research process.

#### Declaration of Competing Interest

We declare that we have no conflict of interest.
